P O R C E L A I N

Ispirato Ai Marmi d'Italia

## ISPIRATO AI MARMI D'ITALIA

KOZO's marble inspired designs take cues from some of the most renowned Italian stones, including Statuario, Calacatta, Arabescato, and others. Using advanced high-definition printing and precise veining detail, these porcelain slabs capture the depth and character of natural marble with remarkable realism. The collection opens new design possibilities, offering solutions that suit both large-scale commercial projects and refined residential spaces. Combining elegance with lasting strength, KOZO Porcelain brings together beauty, durability, and a timeless aesthetic.

## WHY KOZO?

**ADVANCED TECHNOLOGY** – Produced under extreme pressure and heat in the SACMI line, KOZO slabs achieve exceptional strength, hardness, and long-lasting durability.

**HIGH-RESOLUTION DESIGN** – State-of-the-art printing ensures sharp, detailed marble veining that closely replicates natural stone.

**ULTRA-THIN & LIGHTWEIGHT** – Available in 6mm and 12mm, slabs are strong yet easy to transport, install, and even apply over existing floors without demolition.

**LARGE FORMAT** – With dimensions of 1600x3200mm (5.12 sq.m per slab), joints can be strategically placed for cleaner layouts, fewer seams, and enhanced visual continuity.

# ITALIAN TECHNOLOGY

KOZO large-format porcelain slabs are advanced architectural surfaces engineered with premium technical features and produced using state-of-the-art Italian technology from SACMI. This production line represents the highest standard in porcelain slab manufacturing, delivering exceptional quality, precision, and innovation. By replicating the natural stone formation process in a controlled environment, SACMI technology applies immense pressure, up to 400 tons per slab, and extreme heat reaching 1200 degrees Celsius. The result is a product with outstanding strength, hardness, and durability, perfectly suited for modern architectural applications.

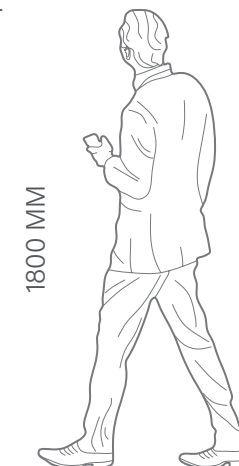

## LARGE FORMAT SLABS

Traditional tile sizes, 60x60 or 80x80, have always struggled to replicate the uninterrupted elegance of natural stone. The frequent joints and repeated patterns create a segmented look that disrupts overall visual flow. With the introduction of large-format porcelain slabs, these challenges have been resolved. Expansive dimensions reduce the number of joints and allow greater flexibility in seam location, giving designers more control over the final look of a space.

Each slab covers an impressive surface area of 5.12 square meters, delivering striking visual impact with fewer interruptions and a stronger sense of continuity. This makes KOZO large format porcelain tiles adaptable to both small and large applications while maintaining a clean, refined finish. In addition, the variety in veining and surface patterns ensures a more natural, non-repetitive appearance, capturing the depth and uniqueness traditionally associated with marble.

1600 X 3200 MM

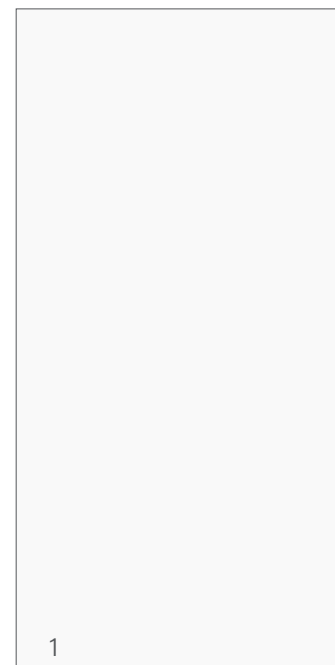

## FINISHES

KOZO Porcelain slabs are available in three distinct finishes: Matte, Polished, & Soft Polished. Each finish is designed to perform best in different environments.

**MATTE** has a smooth but non-reflective surface that delivers a clean, understated look while also offering more traction underfoot. Because it naturally resists showing smudges and light wear, it is highly practical for high-traffic flooring, bathrooms, kitchens, and even outdoor spaces where safety and durability are priorities.

**POLISHED** provides a glossy, mirror-like surface that reflects light and enhances the sense of openness in a room. This finish is often chosen to create a sleek, high-end look in spaces such as lobbies, feature walls, formal dining areas, or luxury bathrooms where elegance and visual impact are key.

**SOFT POLISHED** strikes the balance between the two, offering a satin-like sheen that feels smooth to the touch but without the full reflectivity of a polished surface. This versatile option combines a refined appearance with everyday practicality, making it an excellent choice for living rooms, kitchens, and multi-purpose spaces where both style and functionality are important. Together, these three finishes provide flexibility to match the desired performance and design intent of any project.
